/note-"Vector: pBluescript II SK-; Site_1: EcoRI; Site_2:
XhoI; This library, constructed by John Davies and Jeffrey
McDermott, combines cDNAs from CC-1690 cells grown to
mid-log phase in TAPP (acetate-containing) medium in the
light, TAP medium in the dark, HS (minimal) medium in
ambient levels of CO2 and HS medium bubbled with 5% CO2.
POLYA mRNA was purified from each sample, pooled and cDNA
synthesized The CDNA was directionally cloned into lambda
ZAP II (Stratagene) in the EcoRN (5') and XhoI (3') sites
pBluescript II SY- plasmids were excised from the lambda
ZAP clones by superinfection with ExAssist (Stratagene)
phage: The library was normalized using method 4 described
in Bonaldo et al (1996) Genome Research 6: 791-806."

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NOTE: This is a "working draft' sequence. It currently consists of 56 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

ids5. Ids5 polynucleotides and polypeptides are useful for treating infections; pain, cancer, diabetes, obesity, anorexia, bulimia, asthma, Parkinson's disease, acute heart failure, hypotension, hypertension, urinary retention, osteoprosis, angina pectoris, myocardial infarction, sstroke, ulcers, allergias, benign prostatic hypertrophy, migraine, psychotic and neurological disorders, autilism, multiple sclerosis, alzheimer's disease, and other neurodegenerative diseases, sleep disorder, epilepsy, cardiovascular diseases, arteriosclerosis, cerebrovasospasm, subarachnoid hemorrhage, cerebral isochemia, cerebral infarction, peripheral vascular disease, Raynaud's disease, kidney diseases, gastrointestinal disorders, motility disorders and conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; protease; PCR primer; cytostatic; immunomodulator; cardiant; vasotropic; antimigraine; analgesic; endocrine; nootropic; tranquiliser; hypertensive; hypotensive; neuroleptic; neuroprotective; anabolic; antimiflammatory; aspartyl protease; cysteine protease; metalloprofease; serine protease; cancer; haematopoletic; breast; colon; lung; prostrate; cervical; brain; ovarian; bladder; kidney; pain; immune-related disease; cardlovascular disease; neuronal disease;
                                                                                                                                                                                                                                  of delayed gastric emptying, post-operative or diabetto gastroparesis, diarrhoea, inflammations, chemotherapy induced injury, tumour invasion, immune disorders, arthritis, endotoxin shock, sapsis, complications of diabetes mellitus, and severe mental retardation and dyskinesias, such as Huntington's disease or Gilles de la Tourette's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel protease polypeptide useful for screening for substances that may be used to treat, e.g., cancers, immune-related diseases, cardiovascular disease, migraine, pain, psychotic and inflammatory

The invention relates to an isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase (SEP). The anti-SEP antibody and the compound which inhibits or selectively inhibits the human SEP protein are useful in the manufacture of a medicament for the prophylaxis and/or treatment of sexual dysfunction, in particular male arectile dysfunction (MED) or female sexual dysfunction in particular (e.g. female sexual arousal disorder (FSAD)). The SEP polypeptides are also useful for treating the above disorders and other disorders such as premature ejaculation, anorgammia, sexual pain (e.g. vaginismus) and hypoactive sexual desire disorder. The present sequence is SEP consensus DNA sequence found in human, mouse and rat.
                                                                                                                            An isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase which is useful.for treating sexual dysfunction, for e.g. male erectile dysfunction or female sexual dysfunction such as female sexual arousal disorder

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          e X
                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated human protease polypeptide (PRTS).

PRTS protein and DNA are useful for diagnosing, treating and preventing gastrointestinal disorders (gastriits, cirrhosis, crohn's disease).

Cautoimmune/Inflammatory disorders (AIDS, allergy, rheumatoid arthritis, anaemia, asthma), cardiovascular disorder (atherosclerosis, hypertension, myocardial infarction), cell proliferative disorders (hepatitis, cancer, psoriasis), developmental disorders (Cushing's syndrome, hypothyroidism), epithelial disorder (vitiligo, Reloid, eczema), neurological disorders (epithelial disorder (vitiligo, Reloid, eczema), neurological disorders (epithelisy, Albehmer's disease, Pick's disease, Huntington's disease, Parkinson's disease, and reproductive disorders (infertility). PRTS protein is useful in a number of drug screening techniques and to an insulate the proteome of a tissue or cell type. PRTS DNA is useful for creating knockin humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy and in microarrays curing a libration of the patients to detect altered PKIN
                                                                                                                                                                                                                                                                                                                              New human protease polypeptide, useful in diagnosis, prevention and treatment of gastrointestinal, cardiovascular, autoimmune/inflammatory, cell proliferative, developmental, epithelial and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Metalloprotease; IGS5; infection; pain; cancer; diabetes; obesity; anorexia; bulimia; asthma; Parkinson's disease; acute heart failure; hypotension; hypertension; urinary retention; osteoporosis; angina pectoris; myocardial infarction, stroke; ulcer; allergy; benign prostatic hypertrophy; midrachie; psychotic disorder; neurological disorder; autism; multiple sclerosis; Alzheimer's disease; neurodegenerative disease; sleep disorder; epilepsy; kidney disease;

Use of an inhibitor of neuropeptide Y in the preparation of medicament
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a nucleotide sequence coding for human SEP, a soluble secreted endopeptidase, with an additional 5' vector partial sequence. The invention relates to the use of an inhibitor of NPY, or an inhibitor of NPY XI receptor, especially an inhibitor selective for an NPY or NPY XI receptor associated with male genitalia, in the preparation of a medicament for the erectile dysfunction (MED). The NPY inhibitor may be used with auxiliary active agent such as an SEP inhibitor. The invention provides a SEP assay that can be used to detect candidate inhibitors of SEP. In addition to treatment of MED, NPY inhibitors can also be used to treat abnormal drink and food intake disorders,
                                                                                              male sexual dysfunction; male erectile dysfunction; obesity;

The invention relates to the human SNEPa, SNEPb and SNEPC proteins, and the cDNAs encoding them. SNEPa, SNEPb and SNEPC are neprilysin-like membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc endopeptidases play key roles in the processing and/or metabolism or neuropeptides and peptide hormones. SNEP nucleotides may be used as hybridisation probes for cDNA and genomic DNA; to isolate full-length cDNAs and genomic clones encoding SNEPa, SNEPb or SNEPc; to isolate cDNA and genomic clones of SNEP homologues; as research reagents and material for the discovery of treatments and diagnostics for animal and human diseases; and for chromosome identification. The SNEP proteins may be used as immunogens to produce antibodies immunospensecific for SNEPa or SNEPb or SNEPc. Such antibodies are used to isolate or identify chones expressing the protein, or to purify the proteins by affinity chromatography.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SNEP proteins may also be used in screening for compounds which modulate SNEP proteins may also be used in screening for compounds which modulate SNEP endopeptidase activity; and to assess enzymatic cleavage of small molecule substrates in cells, cell-free preparations, chemical libraries and product mixtures. The SNEP proteins (as vaccine compositions), SNEP nucleotides, and SNEP activators or inhibitors may used to creat acute and chronic renal insufficiency, renal and hepatic ischaemia, pain, stroke, hypertensive disease, cancer, inflammation, as well as cardiovascular, neuronal, pancreatic, prostatic, renal,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New membrane-associated metallopeptidase SNEPa, SNEPb and SNEPc polypeptides and polynucleotides, useful for treating e.g. acute and chronic renal insufficiency, pain, stroke, cancer, inflammation, renal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               analgesic;

New membrane-associated metallopeptidase SNEPa, SNEPb and SNEPc polypeptides and polynucleotides, useful for treating e.g. acute and chronic renal insufficiency, pain, stroke, cancer, inflammation, renal and hepatic ischemia

Claim 5; Page 35-38; 72pp; English.

The invention relates to the human SNEPa, SNEPb and SNEPc proteins, and the cDNAs encoding them. SNEPa, SNEPb and SNEPc are neprilysin-like membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc endopeptidases play key roles in the processing and/or metabolism or neuropeptides and peptide hormones. SNEP nucleotides may be used as hybridisation probes for cDNA and genomic DNA; to isolate full-length cDNAs and genomic clones encoding SNEPa, SNEPD or SNEPC; to isolate cDNA and genomic clones of SNEP homologues; as research reagents and material for the discovery of treatments and diagnostics for animal and human diseases; and for chromosome identification. The SNEP proteins may be used as immunogens to 

produce antibodies immunospecific for SNEPa, SNEPA or SNEPC. Such antibodies are used to identify clones expressing the protein, or to purify the proteins by affinity chromatography. SNEP proteins may also be used in screening for compounds which modulate SNEP proteins may also be used in screening for compounds which modulate SNEP endopertidase activity, and to assess enzymatic cleavage of small molecule substrates in cells, cell-free preparations, chemical libraries SNEP nucleotides, and SNEP proteins (as vaccine compositions), to treat acute and chronic renal insufficiency, renal and hepatic ischaemia, pain, stroke, hypertensive disease, cancer, inflammation, as respiratory or hepatic diseases, they may also be used in modulating peptide activation and/or degradation in the brain or kidney or in another organ, or to diagnose or treat any disorder related to abnormal expression of SNEPa, SNEPb or SNEPc. The present sequence represents CDNA encoding SNEPc.

Novel neutral endopeptidase-like metallopeptidase polypeptides and polynucleotides, used to screen for related sequences and enzyme inhibitors, used for the treatment of NL-3 related bone disorders

Disclosure; Fig 4; 59pp; English

The present sequence encodes a human neutral endopeptidase

```
The invention relates to the human SNEPa, SNEPb and SNEPc proteins, and the cDNAs encoding them. SNEPa, SNEPb and SNEPc are neprilysin-like membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although
                                                                                      downstream from and in phase with the N-terminal region. The NL enzymes are have been localised to the brain, and may be useful in the treatment of neurological diseases such as Alzheimer's disease, pain, and psychiatric disorders. NL enzymes have also been localised to the testis and ovaries, and may be used to control fertility. They have also been localised to bones, and may be used to treat bone diseases, and abnormal phosphate metabolisms related to improper peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      respiratory disease; gene therapy; nephrotropic; vasotropic; analgesic;

the neprilysin family of zinc endopeptidases play key roles in the processing and/or metabolism or neuropeptides and peptide hormones. SNEP morelectides may be used as hybridisation probes for CDNA and genomic DNA; to isolate full-length CDNAs and genomic clones encoding SNEPs, SNEP or SNEPc; to isolate CDNA and genomic clones of SNEP homologues; as research reagents and material for the discovery of treatments and diagnostics for animal and human diseases; and for chromosome identification. The SNEP proteins may be used as immunogens to produce antibodies immunospecific for SNEPs, SNEP or SNEP or SNEP proteins and antibodies are used to identify clones expressing the protein, or to purify the proteins by affinity chromatography.
                                                                                                                                                                                                                                      SNEP endopeptidase activity, and to assess enzymatic cleavage of small molecule substrates in cells, cell-free preparations, chemical libraries and product mixtures. The SNEP proteins (as vaccine compositions), SNEP nucleotides, and SNEP activators or inhibitors may used to treat acute and chronic renal insufficiency, renal and hepatic ischaemia, pain, stroke, hypertensive disease, cancer, inflammation, as well as cardiovascular, neuronal, pancreatic, prostatic, renal,
                                                                                                                                                                                                                                                                                                                                                                    respiratory or hepatic diseases, they may also be used in modulating peptide activation and/or degradation in the brain or kidney or in

An isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase which is useful for treating sexual dysfunction, for e.g. male erectile dysfunction or female sexual dysfunction such as female sexual arousal disorder.
                                                                                                                                                                                                                                                                                                               (e.g. female sexual arousal disorder (FSAD)). The SEP polypeptides are also useful for treating the above disorders and other disorders such as premature ejaculation, anorgasmia, sexual pain (e.g. vaginismus) and hypoactive sexual desire disorder. The present sequence is human SEP
                                                                                                                                                                                                            The invention relates to an isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase (SEP). The anti-SEP antibody and the compound which inhibits or selectively inhibits the human SEP protein are useful in the manufacture of a medicament for the prophylaxis and/or treatment of sexual dysfunction, in particular male erectile dysfunction (MED) or female sexual dysfunction (FSD)
                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2893 BP; 658 A; 854 C; 876 G; 505 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   linkers dapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORII vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DH10B host cells. This library was constructed in the laboratory of Dr. Lil Vookin by Anu Khanna at the University of Illinois at Urbana-Champalgn. e-mail: 1-vookin@uluc.edu"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 connection was constructed from 2 months to 9 months) cultured on MSD 20. The library was prepared using the Life Technologies psuperScript conv library construction kit. Complementary DNA was synthesized from mRNA using poly (dT) sequence with a NoII restrictions site. Sall linkers adapters were ligated to the blunt-ended CDNA fragments followed by NoII digestion. The CDNA fragments were directionally cloned into the NoII sall restriction site. Sall site of the pSPORTI vector. The ligated CDNA fragments were transformed into E.coli ElectroMax DHIOB host cells. This library was constructed in the laboratory of Dr. Lile

AW688064 576 bp mRNA linear EST 15-JUN-2000 NF004A01ST1F1000 Developing stem Medicago truncatula cDNA clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                finkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The CDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORTI vector. The ligated cDNA fragments were transformed into E.coll ElectroMax DH10B host cells. This library was constructed in the laboratory of Dr. Lila

The library was prepared using the Life Technologies pSuperScript CDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly (dT) sequence with a Not1 restrictions site.
